## 🎓 EDUCATION

<b>Peking University</b> , Beijing, China	2020.09 – 2023.06
<i>Master student</i> in Software Engineer	
Advisor: Prof. Ke Xu, GPA: 3.35/4.0, <b>National Scholarship Winner</b>	
<b>Xidian University</b> , Shaanxi, China	2016.09 – 2020.06
<i>B.Sc.</i> in Computer Science and Technology	
GPA: 3.8/4.0 (Ranking 8 / 120), English: CET-6 511, <b>National Scholarship Winner</b>	
<b>Xi'an No.89 Middle School</b> , Shaanxi, China	2013.09 – 2016.07
Class One of the entire grade	

## 📖 PUBLICATIONS AND PATENTS

### Backdoor attack method and device for malicious URL detection system

- Ke Xu, Yi Zhao, **Jiahua Chen**.
- China Patent No. ZL 202310559925.9, 2023.

### A Cluster-Based Adaptive Robust Collaborative Learning Method and Device

- Ke Xu, Yi Zhao, **Jiahua Chen**.
- China Patent No. ZL 202210843405.6, 2022.

### Stable Evaluation Model Compatible with Heterogeneous Data

- Yuhong Cao, Yi Zhao, **Jiahua Chen**.
- Journal of Chinese Computer Systems, 2021

## 👤 EXPERIENCE

<b>Beijing Sankuai Technology Co., Ltd. (Meituan)</b> Beijing, China	2023.07 – 2025.06
<i>Software Development Engineer</i> Mentor: Hongjie Duan	
<ul style="list-style-type: none"><li>• Protect the lives of millions of riders in the delivery process with multiple AI methods, for example, image recognition is used to verify whether it is the rider himself.</li><li>• Use LLM to recommend scenes / actions to improve the quality and efficiency of software development process.</li><li>• Use MobileAgent to perform software operations to simulate the process of user operation of Meituan App.</li></ul>	
<b>Samsung Electronics China Research Institute</b> Beijing, China	2022.07 – 2023.01
<i>Research Intern</i> Mentor: Senior R&D Engineer Hanchao Jia	
Research Topic: Investigating the learned knowledge of image generation and large-scale pre-trained multimodal models such as VQ-VAE, VQ-GAN, MaskGIT, etc. Testing the execution time and equipment overhead of existing models. Devising novel methods to improve the quality of image generated by models.	
<b>Tsinghua University</b> Beijing, China	2021.02 – 2022.06
<i>AI for Network Security Intern</i>	
<ul style="list-style-type: none"><li>• Robust Malicious URL Detection System: Aiming at the low efficiency of zero-hour malicious URL detection by the blacklist method, an efficient and robust malicious URL detection system is designed by using the user's browsing data through federated learning. A robust federated learning aggregation method is designed.</li><li>• A Stable Evaluation Model Compatible with Heterogeneous Data: Aiming at the unfair scoring phenomenon in parallel group interviews, based on the repeated improvement principle of PageRank and HITS, a stable evaluation model is established to adjust the extra-group deviation and intra-group deviation caused by group evaluation.</li></ul>	

- Abnormal Traffic Detection Based on Machine Learning: Reproducing the classic method of abnormal traffic detection Kitsune. Then the graph neural network is used for abnormal traffic detection, and the abnormal traffic window size is used as an indicator of the adjacency matrix in the computational graph neural network.

## 🌟 HONORS AND AWARDS

---

<i>Excellent Graduate</i> , Peking University and Beijing Municipal Education Commission	2023.07
<i>Award for Academic Excellence</i> , Peking University	2022.10
<i>National Scholarship</i> , Ministry of Education	2021.10
<i>Merit Student Pacesetter</i> , Peking University	2021.10
<i>National Scholarship</i> , Ministry of Education	2019.11
<i>First Prize</i> , The Chinese Mathematics Competitions	2018.11

## ≡ SKILLS

---

**English** : CET-6 : 511 , GRE : 301(138+163)+2

**Coding** : Python, C++, Java, C#, PyTorch, Keras
